

# Vortex Fire

*Propane or Natural Gas*

Our Vortex Fires are manufactured for both indoor and outdoor use. **However, if you plan to use them indoors you must make sure to comply with local building codes.** Our Vortex Fires are naturally aspirated - meaning there are no electronics involved. The swirling flame is generated by how we engineered its construction. All our Vortex Fires are built to order and can be modified to fit your design needs.

Construction time ranges from 5 to 8 weeks depending on our workload.
